

RIESLING

Trifolium repens

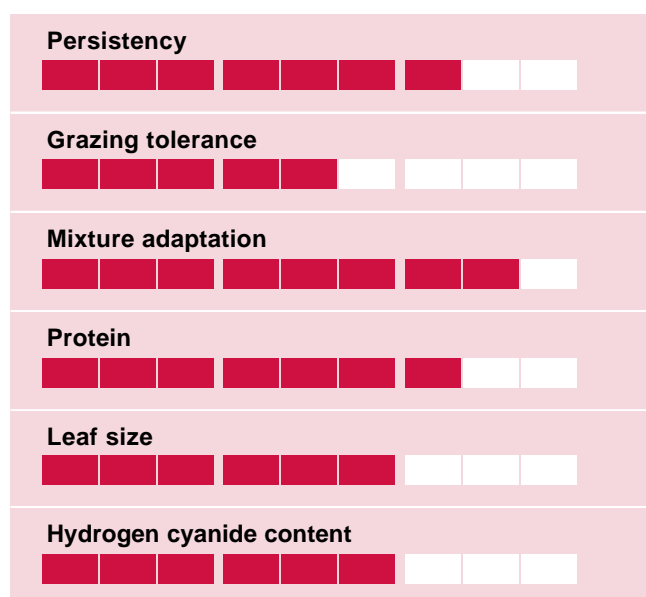

White clover

White Clover - Intermediate to large leaved variety with high yields

- Intermediate to large leaved
- Grazing and conservation type
- High yielding variety
- Good persistency and spring vigor

Ratings

Type of variety

Classified as medium to large leaved, Riesling still fits in the 'hollandicum' group.

It is thus one of the most versatile varieties, allowing rather frequent as well as light defoliation.

Contributes strongly to high yields

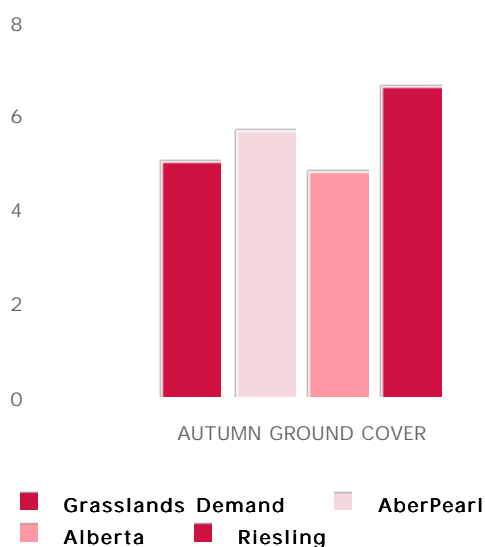

Riesling not only supplies nitrogen to the grasses improving their yield, it also has a high proper yield.

HCN content

The HCN content is average - enough to limit slug damage in most situations.

Autumn ground cover
